FINAL PROJECT GUIDELINES
IT 321 – HUMAN-COMPUTER INTERACTION
Information Technology Department
2nd Semester AY 2025-2026

I. General Overview

The Final Project for IT 321 requires each group to design a UI/UX mockup or prototype of a system aligned with their Capstone Project or a Sustainable Development Goals (SDG)-based problem.

This project aims to:

- **ILO1:** Explain and apply fundamental principles, theories, and standards of Human–Computer Interaction (HCI) and user-centered design
- **ILO2:** Analyze and evaluate user interaction problems using usability principles and human factors
- **ILO3:** Design and develop inclusive, usable interface prototypes following HCI standards and evaluation methods

The output should demonstrate a strong understanding of usability, accessibility, and user-centered design through a low- or high-fidelity prototype. Functional coding is **not required**.

II. Prototype Guidelines (Design and Layout)

A. Purpose

- To showcase the user interface and interaction design of the proposed system.
- To demonstrate how users interact with the system, applying HCI principles.
- To visualize design solutions for a real-world problem (capstone or SDG topic).

B. Technical Requirements

1. Functionality (as Mockup)

- Include key screens/pages (e.g., login, dashboard, core features, forms)
- Clearly illustrate user interaction and navigation flow
- Show logical task completion and system responses

2. Design and Presentation

- Apply HCI and UI/UX principles:
 - Consistency and clarity
 - Simplicity and minimal cognitive load
 - Feedback and affordances
 - Accessibility and inclusivity
- Provide low-fidelity wireframes or high-fidelity prototypes.
- Interactive mockup using tools like Figma, Adobe XD, or Canva.

3. Documentation and Demonstration

- Include a **brief explanation of each screen and design choice**.
- Present the mockup through:
 - Slide presentation, or
 - Recorded walkthrough of the prototype.

4. Testing and Evaluation

- Conduct peer/usability testing to identify navigation or usability issues.
- Document feedback and design improvements.

E-mail Address: cics.lipa@g.batstate-u.edu.ph | Website Address: <http://www.batstate-u.edu.ph>

5. **Safety and Ethics**

- Ensure the design respects privacy, security, and ethical considerations.
- Avoid offensive or inappropriate content.

III. Manuscript Guidelines (Documentation)

A. Format

- Consistent formatting (title page, table of contents, page numbers).
- Include diagrams/screenshots of mockups.

B. Content Structure

1. **Introduction** – Overview, problem statement, objectives.
2. **System/Topic Description** – Description of the capstone or SDG-based system.
3. **Design & Layout** – Screenshots/images of mockups with explanations.
4. **User Flow & Interaction** – Diagrams showing how users navigate and interact.
5. **Usability Testing & Feedback** – Summary of peer testing, findings, and improvements.
6. **Conclusion & Reflection** – Insights on design choices, HCI principles applied, and system relevance.

IV. Submission Requirements

- Submit design mockups (low/high fidelity or interactive).
- Submit manuscript/documentation in PDF format.
- Include all supporting files (images, flowcharts, diagrams, prototypes).
- Group: 3–4 members.
- **Presentation: May 15, 2026.**

V. Evaluation Criteria

CRITERIA	DESCRIPTION	ILO Alignment	Weight
Prototype	The Prototype evaluates the quality of the UI/UX mockup in terms of design, usability, and responsiveness. It focuses on how well the group applied Human-Computer Interaction (HCI) principles to create an intuitive, user-centered, and visually consistent interface. The prototype should clearly present system features, user flow, and interactions, even if it is not functionally implemented.	ILO1 ILO3	70%
Communication	The Presentation assesses how effectively the group communicates their design. It includes clarity of explanation, organization of ideas, confidence, and the ability to clearly demonstrate the prototype. Students are expected to articulate their design decisions, user flow, and applied HCI principles, and respond appropriately to questions.	ILO1	20%
Documentation	The Documentation evaluates the completeness and quality of the written manuscript. It should clearly explain the project's objectives, system concept, design process, and user flow, supported by mockups and diagrams. The document must be well-organized, accurate, and written with proper grammar, reflecting a clear understanding of HCI concepts.	ILO2 ILO3	10%
TOTAL			100%

VI. Reminders

- Focus is on design/layout and usability, not coding.
- Apply HCI principles: usability, accessibility, consistency, and feedback.
- Test the prototype for clarity and user understanding.
- Ensure each group member contributes equally to design, documentation, and presentation.

FINAL PROJECT GRADING SHEET
IT 321 – HUMAN-COMPUTER INTERACTION
Information Technology Department
2nd Semester AY 2025-2026

Project Title:	
Section:	
Group Members:	
Evaluator:	
Date:	

1. PROTOTYPE (70%)

Criteria	Description	Score
UI/UX Design Quality	Visual appeal, consistency, layout, and application of HCI principles	/30
User Flow & Interaction	Logical navigation, usability, and user-centered design	/20
Responsiveness & Accessibility	Adaptability across devices and inclusive design	/20
Subtotal		/70

2. PRESENTATION (20%)

Criteria	Description	Score
Communication Skills	Clarity of speech, organization of ideas, confidence, and delivery	/10
Demonstration & Explanation	Clear walkthrough of prototype, explanation of design decisions, and application of HCI principles	/10
Subtotal		/20

3. DOCUMENTATION (10%)

Criteria	Description	Score
Clarity & Organization	Logical structure, easy to understand content	/5
Technical Accuracy & Grammar	Correct use of HCI concepts and proper language usage	/5
Subtotal		/10

TOTAL SCORE: _____
